Run!

Threads are used as HTTP workers, pengines and some adminstrative tasks. Visitors is the number of open websockets, which reflenumber of browser windows watching this page.

Memory usage over the past hour

rss is the total (_resident_) memory usage as reported by Linux. **stack** is the memory occupied by all Prolog stacks. **heap** is an approximation of the memory used for the Prolog program space, computed as *rss* - *stack* - *free*. This is incorrect for two reasons. It ignores the C-stacks and the
